<b>Office Action Summary</b>	Application No. 10/673,321	Applicant(s) MITROVIC, ANDREJ S.	
	Examiner Mark H. Paschall	Art Unit 3742	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brcka et al in view of Benjamin et al. Brcka et al teach the claimed invention except for showing sensing at multiple locations in the chamber, and exterior to the chamber, and calculating the load impedance from the same. In this respect the patent to Benjamin et al is applied for teaching that it is conventional to sense with two feedback or sensing circuits, to calculate the load and matching impedance and use of the two circuits compensates for both capacitive and inductive coupling of the power source to the load, leading to a more accurate load impedance matching. In view of this teaching it would have been obvious to modify the Brcka et al system to use two sensing or feedback systems in lieu of the one claimed, so that compensation from both inductive and capacitive coupling is effected. As per dependent claim 19, note that Brcka et al teach a computer use to process the information sensed, as claimed. See column 8, paragraph 2.

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Goodman et al, Flamm et al, Qian et al and Parsons are cited for disclosing plasma impedance matching systems of interest. .
